

## History of the French Society of Radiology

Mis à jour le 28/09/2015 par SFR

The centenary of the French Society of Radiology in 2009 was the occasion for a number of us to look back and to acknowledge now the actions of our predecessors may help us to continue to move forward. The SFR has been a key driver of the coherent development of our discipline.

A large number of documents, testimonies and books exist. A number of initiatives have already valued the history of radiology in France: An Illustrated History of radiology by Guy and Marie-José Pallardy and Auguste Wackenheim in 1989, History of the French Society of Radiology in 1999 by Henri Nahum, updated by his articles the year of the centennial.

The creation of an "archives and history of radiology" commission has gradually emerged as essential within the SFR. The main objective is to promote the history of the society from already existing documents, but also the role of radiology in medical adventure, history of different actors (radiologists, technicians, industrial ...) and imaging techniques.
